Our products have been certified by DVGW, WRAS, CSTB, ACS, GDV, and VDS. Especially for thick-wall carbon press piping, we have CUPC, FM and UL certificates. We have independent large CNAS approved laboratories with various inspection facilities for fittings and piping system. Such as material test and dimension calibration, spectrometer, profile scanner, CMM, metallographic analyzer, salt spray test, pull-out test, pneumatic leakage test, eddy current testing line, bursting test, tumbling test, life cycle test, etc.

We inherit to the business philosophy of energy saving, environmental and sustainable development to lead the industry. Our company adheres to the strategic policy of "Making quality products, Setting a model for the business", and friendly cooperates with domestic and foreign customers with high-quality services, and work together to win splendid future!

COMPANY PROFILE

We, IPC Piping system Co. Ltd, with a registered capital of USD 20 million and turnover USD 200 million 2023, are a national high-tech enterprise, certified by ISO9001, ISO14001 and also OHSAS18001/ISO45001. Our company is the world leading manufacturer of Carbon steel and Stainless steel Press Fitting and piping system.

We have established three manufacturing bases in China, one is in Taizhou, Zhejiang and another one is in Xingtai, Hebei province and a New Smart Factory in Jiaxing, Zhejiang which was finished in May, 2021. The new base is a first advanced "lighthouse model" factory in this industry in China. All production bases are equipped with leading automated production facilities and lines. We also use advanced technology of Electrophoresis surface treatment and nanotechnology epoxy resin coating. Through excellent innovation, research and development, our products are widely used in Water Supply, Gas, Fire Protection, Municipal Water Treatment, HVAC and other supporting application.

COMPRESSED AIR TECHNOLOGY

Compressed Air Technology is used throughout the industry from small workshops to large factories. Whether it is used to drive tools and machines, or to control producing or clean parts, it becomes indispensable from the point of view of modern production.

High energy costs is a major weakness of Compressed Air. Here, LEAKS in the piping system is by no means a trivial part of the energy cost. Energy losses are usually due to leaky screw connections, hemp threads drying out at the screw connections, holes due to corrosion, damage due to compressor oil seals, defective adhesive points, etc. Due to these factors, it is necessary to pay attention to the sealing performance of the pipeline when selecting the pipeline system. Industrial piping system is designed in this way, in view of the piping material and connection technology to meet the requirements of compressed air equipment, it is a good way to reduce energy costs by improving sealing solution.

IMPORTANCE OF COMPRESSED AIR PIPING SYSTEM

Safety and Stability

Safety is the key priority in the design of all air compressor stations, and air power gas, with a certain working ability, leakage and looseness of the pipeline system will cause unpredictable safety and production accidents and even cause heavy personal casualties.

Energy-saving

With the country's higher requirements for environmental protection, the air compressor piping system should also be designed to conform to the general direction of the country. A good pipeline has the characteristics of safety and no leakage to save resources for the society and the country.

Reduce the cost

Air compressor piping system design must consider reducing air resistance, reducing energy consumption, and save costs. Precipitation or oxide precipitation inside the pipe will cause air pressure for a long time. Increase the resistance and reduce the quality of the downstream gas, increase the loss of the post-processing equipment and increase the gas consumption. The service life of the equipment is reduced or even scrapped in advance, resulting in significant economic losses.

Fast to install

The maintenance costs of modern factories are increasing day by day, and the installation of piping systems is easy. It means less manpower, saving a lot of installation costs, and at the same time coping with emergencies. Therefore, it is faster and more effective.

IMPORTANCE OF COMPRESSED AIR PIPING SYSTEM

IPC Pipe Compressed Air Piping System reduces the loss of air compressor station room piping systemmaximumly, in the mean-while, it also reduces the energy loss.Using three machines in parallel, carbon steel piping system connects with Air Compressor, Air Receiver, Triple Filter, Dryer, Desiccant Air Dryer, the Bypass and other equipments to reduce the loss of reduced voltage, fast installation, save the installation cost and time cost. The cleanliness of piping system, excellent visual experience, standardized process , brings more security guarantee.

While ensuring the safety of gas use in your workshop pipelines, taking into account the energy saving of the overall pipeline network, all pipelines are designed to meet the pressure requirements of the gas-using equipment, and the fast installation and gas extraction plan can ensure the gas demand of your newly added equipment.

Design three-level ring network structure

- Big ring network
- Higher ring net
- Lower Rotation 90 Degree Ring

The ring network reflects the thickness of the pipeline, the lower fulcrum and other elements.

ADVANTAGES

High Security

- Pressure rating up to 1.05MPa, press fitting design
- Strong resistance to air hammer vibration, no detachment and no bursting.

Small system piezoresistance

- Full streamlined pipe network design, no 90-de-gree vertical angle;
- Reduce the air resistance in the pipeline and save more energy.

Hole [mm]	Air loss when it is 6 bar[l/s]	Energy loss [kWh/h]	Cost [€/a]
• 1	1.238	0.3	390.-
• 3	11.14	3.1	1,070.-
• 5	30.95	8.3	10,890.-
• 10	123.8	33.0	43,310.-

Cost calculate: KW x 0.15€/kwh x 8750 operation hour/a

Strong corrosion resistance

- Germany EP coating technology
- The salt spray test is up to 1000 hours, and the corrosion resistance is widely used.

Convenient installation

- The press connection technology from Europe
- More fast to intall piping.

Clean air source

- There is no precipitation and oxide precipitation in the system;
- The gas source is clean, without a lot of processing costs, and the long-term piezoresistance is low.

Linear compensation

- Axial linear compensator is set to effectively reduce pipeline installation stress;
- Absorb the axial cold and heat deformation of the pipeline and the vibration of the pipeline
- Reduce the damage of pipe network deformation caused by thermal expansion and cold contraction

Maintenance free

- Prefabricated standard colour (sky blue RAL 5015)

Custom Service

- Customize piping according
- Make sure the energy saving of piping system and the convenience of maintance.

COMPRESSED AIR PIPING SYSTEM

IPC Piping has a complete product line of CPA air compressed pipe systems, with the ability to solve problems and innovate product s constantly; We become more competitve, since we are always commitment to localization, serving users with better life cycle costs.

INSIDE SURFACE CORROSION RESISTANT
(High Density, low porosity, Rust-free)

EPOXY RESIN COATING
(Germany Technology)

SMOOTH INSIDE SURFACE
(Oil and Dirty-free and Not Easy to be scaled)

FAST, COST SAVING EASY INSTALLATION
(No maintenance required)

GERMAN TECHNOLOGY

IPC Piping CPA air compressor pipe line adopts German Electrophoresis & Epoxy Resin outer coating and high temperature resistant inner coating on the basis of internal and external galvanized carbon steel pipe, and the neutral salt spray of the product can reach 1000 hours, and the traditional ordinary cold galvanizing is only 96 hours, and the hot-dip galvanizing is about 200 hours.

Our product is green, eco-friendly, with better corrosion resistance and product life of 30 years.

German Electrophoresis & Epoxy Resin Outer Coating

- Excellent corrosion resistance, strong weather resistance, good color retention.
- Salt spray test can reach more than 1000 hours.
- Strong adhesion, the coating is not easy to fall off and bruise.
- It can prevent the thermal aging of the thermal insulation material or the corrosion effect on the outer wall of the pipeline after being hydrolyzed by moisture.

High temperature resistant coating

- High density. Low porosity. Strong resistance to penetration of water, oxygen and ion.
- Smooth surface, low flow resistance, oil resistance,not easy to scale.
- High binding force, not easy to foam or peel.
- Good anti-corrosion effect and long life.

COMPARING WITH TRADITIONAL GALVANIZED PIPE

- Smooth surface,low coefficient of friction
- Low Initial pressure drop
- Pipes and pipe fittings are coated with epoxy resin inside and outside, not easy to be corroded
- Pipes in light weight
- Professional tools, easy installation and low labor intensity
- Compact design with less local pressure loss
- German technology safe and reliable
- 20%-30% saving in total cost
- Longer lifecycle

- Rough surface and high coefficient of friction
- High initial pressure drop
- The corrosion resistance of pipes and fittings depends on the galvanized layer. The interface is more prone to corrosion
- Pipes are heavy
- Threaded connection, on-site processing, time-consuming and labor-intensive
- Casting products, the local pressure loss is large
- Threaded connection, PTFE tape sealing, great potential risk
- Much higher total cost

The apongee of the pressure drop is the pressure difference between the point of creation and the point farthest from the installation. High pressure drop means that the compressor adjustment pressure value should be set higher to compensate for the pressure drop.

PRESS FITTING

Since the invention of press connection various regions and countries around the world have gradually abandoned traditional piping connection such as welding, thread, etc. but accept this reliable, fast and cost-saving press fitting. It has been widely applied to many metal piping.The sealing of pressing is to compress the elastic rubber O-ring and press tightly in the radial direction without any gap.

Pulling out Resistance : the pressed part is deformed to be smaller than the pipeline. Press fitting is quickly installed and an ideal fitting for harsh installation environment Avoid the labor like thread-ing welding etc. The time for one press cycle is less than half of the traditional threaded fitting. The press technology provides simple installation whether in narrow pipeline well or in water seepage trench.

PULLOUT RESISTANCE OVER 1200N, 7 SECONDS INSTALLATION, LONGERLIFECYCLE

	TOOLS AND ACCESSORIES	PROCESS PROCEDURE	INSTALLER QUALIFICATION	CORROSION RESISTANCE	TIME FOR INSTALLATION	LABOR DEMAND
WELDING CONNECTION	 Heavy tools and numerous accessories	 Potential risk of safety with open flame welding	 Skilled welding operator with 3-5 years of experience	 Repeated painting process	 More than 60 minutes	 6 operators
THREAD CONNECTION	 Heavy tools and numerous accessories	 Heavy and complicated threading operation	 Skilled operator with 1-2 years of experience	 Repeated painting process	 30 minutes	 4 operators
PRESS QUICK INSTALLATION CONNECTION	 Easy tools and simple cross checking	 One press done	 Simple training Quick start	NO EP coating,Painting free,Healthy and Environment friendly	 15 minutes	 2 operators

ONLY 7 SECONDS FOR EACH PRESS

1.TUBE CUTTING

It is important to ensure that the tube is cut completely square. Tube ends should be clean and free from scratches not less than the socket length. check the tube has retained its shape.

2.DEBURRING

Make sure that the internal and external tube end is free from burrs or sharp edges by using a deburring tool to prevent damage to the O-ring.Then wipe the tube end clean to avoid damaging the O-ring on tube insertion.

3.INSERTION DEPTH MARKING

The tube must be fully inserted into the fitting until it reaches the tube stop in order to make a perfect joint. Marking insertion depth will ensure that any tube movement is detected, which is especially important if the joints are to be pressed at a later time.

4.COMPLETE THE JOINT

Ensure that the correct size jaw for the fitting is inserted into the tool. The jaws must be placed square on the fitting. Depress the trigger/button to begin the compression cycle of the tool. This is complete when the mouth of the fitting is fully enclosed by the jaws. Now release the jaws from around the fitting.

PATENTED RING

Visible Safety

- Blatant warning of un-pressed joints.
- Pressing friction force reduced. Fitting coating layer protected.
- Different colors indicate different usage of the fittings.

National Patents:

- ZL201120458332.6
- ZL201130427282.0
- ZL201130427281.6
- ZL201110366380.7

O-RING LIFETIME: 70 YEARS

- Significant anti-abrasion performance under extremely hazardous conditions.
- Out standing expanding properties to achieve liquid resistance(oils that contain corrosive additives)
- Good heat resistance. Ozone resistance. Weathering aging resistance. Resistance to chemical acid and alkali.
- Maintains good mechanical properties even under rising temperature.
- Excellent acid resistance(sulfuretted hydrogen) and resistance to amine / oil mixtures.

Material	Temperature Range	Max. Working Pressure	Product Compatibility
EPDM (Black)	-30 C -120 C	1.05Mpa	Oil-free air compressed system(conform to ISO 8573-1 1-3)

PRESS TOOL

Safe, effective and economical fast fit pressing can only be realized when the pipe, fitting and tool coordinate and match with each other. We select high quality and professional international pressing tool brands to fit the demand of fast fit pressing connection under different conditions. One set of tools can be suitable for all calibres. Installation will be more convenient.

- High-strength forged steel jaws, strong, durable and excellent performance.
- High-performance lithium battery ensures 200 crimping cycles after fully recharge.
- Long service time, 32,000 crimping cycles after maintenance.
- Only 7 seconds automated crimping process with single finger press
- LED display screen, easy to read working status.
- Automatically reset to starting position after each crimp.
- Spring driven pin to fix press jaw effectively prevents misoperation.
- 270° rotation
- Compatible with other 18V lithium batteries and power adapters.

We offer variant accessories for different press system circumstances.

Jaw: 15-18-22-28

Ring: 35-42-54-76-89-108

STANDARD

GB/T 27891-2011

CJ/T 433-2013

T/CECS618-2019

According to "Technical Specifications for Press Type Carbon Steel Pipeline Engineering" TCECS618-2019,4.1.1, the working pressure of carbon steel press type pipe system shall not be greater than the nominal pressure of the pipe and pipe fittings. When used for compressed air, the working pressure should not be larger than 1.05MPa.

检测报告

报告编号: XJ2021C01D00583 中期-1

委托單位： 浙江維尼及智慧管網股份有限公司

样品名称: 压接式涂塑碳钢管材、管件

检测类别: 型式检验

国家建筑材料质量监督检验中心
中国建材检验认证集团股份有限公司

國家建築材料質量監督檢驗中心

检测报告

报导编号: XJ2021C011000583 中期.1

样品名称	福建汉光智能管网材料、管井	检测类别	型式检验
委托单位	浙江汉光汇智管网科技股份有限公司	抽样编号	CYC-CY-2021-0145
受托单位	浙江汉光汇智管网科技股份有限公司	商 标	C (浙江汉光)
生产单位	浙江汉光汇智管网科技股份有限公司	样品状态	样品完好
生产地址	国家建筑材料质量监督检验中心	型号规格	DN20 (122358)
生产日期	2021 年 01 月 15 日	抽样基数	管长: 3000 m; 管径: 1200 mm
抽样日期	2021 年 03 月 30 日	抽样数量	管长: 18 m; 管径: 48 mm
收样日期	2021 年 03 月 31 日	抽 样 人	张 群
抽样方式	随机抽样	封 样 人	张 群
抽样地点	成品库前	封样状态	封条完好
检测依据	依据国家现行标准执行检测。		
判定依据	GB/T 433-2017《给水处理用玻璃钢管及配件》 TCLCS 618-2019《给水处理用管道工程应用技术规程》		
检测结果	经管表面质量、钢管气密性试验等 21 项检测, 检测结果见下表。		
检测结论	“经检测, 送检样品符合项目国家产品标准要求, 管井外表面符合检测标准相关要求” TCSYS 618-2019《给水工程管道工程应用技术规程》相关要求, 其他检测项目的检测结果符合 GB/T 433-2017《给水处理用玻璃钢管及配件》的技术要求, 检测结论见下表。		
备注	签发日期: 2021 年 04 月 01 日 (检测专用章)		
附注:	此报告为中期报告, 顾客应以最终的检测报告为准。
